

INFORMATION PROCESSING APPARATUS, PROGRAM PRODUCT  
AND INFORMATION PROCESSING SYSTEM

ABSTRACT OF THE DISCLOSURE

The present invention provides an information processing apparatus, a program and a system in which a user sets data about electric power conditions in the information processing apparatus so as to reduce electric power consumption of the input/output device when the user is not in front of the input/output device. The information processing system comprises the information processing apparatus 101 comprising a storage section 106 for storing the data about the electric power conditions of the input/output device, and the input/output device 110, wherein the information processing apparatus comprises an input/output control section 104, 105 for giving and receiving information to/from the input/output device, and the input/output control section gives instructions about electric power conditions to the input/output device, regardless of whether or not input data from the input/output device or output data to said input/output device is transferred and the input/output device controls the electric power conditions based on the instructions.
